Roberts Mechanical Now Offers a Direct Line of Quality Storage Tanks

December 09, 2004

Roberts Mechanical Equipment announces today that they have reached an agreement with the Niles Steel Tank Company for exclusive representation of Northern Ohio.

Founded over 100 years ago, Niles is a manufacturer dedicated to the glass lining industry bringing RME a full line of competitively priced glass lined storage tanks. Many water heater companies either make or name brand tanks to compliment their line of plumbing products, but Niles concentrates solely on manufacturing quality and competitive tanks.

What's more important is Niles will 'Stock' storage tanks up to 1500 gallons in 2005. This is rare in the industry and gives our contractors and engineers near instant access to replacement storage tanks. The company is located in close proximity to Northern Ohio (Niles Michigan) so freight is expected to be quick and reasonably priced.

In addition to all these benefits, RME finds Niles to be a very flexible company willing to build customized tanks in a surprisingly fast manner. If you are an industrial contractor or engineer, you may recognize the Niles name as they have dominated a market that provides glass linings for many industrial processes including reglassing older equipment. Some of the glass process which they have developed are used in reactors and designed to with stand various chemicals. They provided agitators, gear drives, impellers, gaskets, pipe fittings, flanges, and manways to this industry in addition to the storage tanks and glass linings.

Look for local distributors to give you instant access to the jacketed and insulated 80, 119, and 200 gallon tanks very soon. Larger tanks will be distributed and priced by RME directly. Niles will make standard tanks in the larger sizes from 193 to 1316 gallons (nominal) both bare and jacketed. Their tanks can be ordered at 125PSI or 150PSI and meeting both ASME and the ASHREA standards for efficiency. The full line is offered with options for epoxy lining, double glass coating, manways, hand holes, saddles for horizontal configurations, and full stainless steel construction or stainless steel connections.

RME carefully considered this company and through their research found that these tanks are extremely competitive and should give our contractors a decisive edge over the competition. Please look for more information on this quality product very soon!
