

MAINTENANCE FACILITY SAFETY AND COMPLIANCE TRAINING

WHO SHOULD ATTEND

All employees related to the care and accountability of their mechanical rooms. Specifically their boilers and/or water heaters. This includes any city, county or state maintenance workers, facility managers, and or department head. Also, anyone working in the boiler room of schools at any level.

THE AGENDA

- The most common mechanical code violations.
- Recognize when venting is either non-code compliant or improperly applied.
- Why combustion air issues are among the most common reasons for failure and/or catastrophic issues.
- The effects of positive and negative building pressure and how it affects combustion equipment.
- Common failures in boilers you can catch before it's a catastrophic issue.
- The value in maintaining equipment to avoid service and increase/maintain efficiency.
- How air wrecks havoc on a hydronic system.
- Most ignored steam system issues that when left undetected could be a substantial cost.
- Be a part of your next design and spec! Good boiler selection (replacement) and how a direct rep works with engineers, contractors, and you.
- Understanding deception of boiler efficiency and when to invest in high efficiency equipment.

LIMITED SPACE AVAILABLE. 35 MAXIMUM ATTENDEES.

DATE: October 26th, 2023

TIME: 11:30am to 1:30pm

LOCATION: 7370 Northfield Road, Walton Hills, Ohio 44146

COST: Free of charge to those who register and attend
